

# CHARTERED STRUCTURAL ENGINEER

A small well established firm of Consulting Structural and Civil Engineers based in Kings Lynn requires a Chartered Structural Engineer to join the team. Our busy workload varies from small domestic alterations to large new build projects. Much of our work is to do with altering/extending existing buildings, some of historic interest.

We are looking for a Chartered Engineer with at least 3 years post Chartered experience. The candidate should be able to demonstrate a proven ability to run projects and communicate effectively with clients, Architects and other professionals. Good written skills are essential. Preparing fee proposals and monitoring project costs will be an important part of the job.

Workload will range from carrying out structural inspections of buildings and preparing reports, domestic alteration projects through to large commercial new build and refurbishment schemes. The successful candidate must be prepared to produce calculations and drawings themselves.

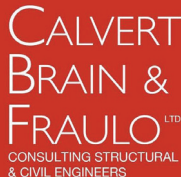

For someone interested in this type of work and wanting to continue to have hands on experience in a small consultancy (there are currently 6 staff, this vacancy having arisen due to a Senior Structural Engineer taking retirement) this is an opportunity to be involved in the running and future development of the company.

Our Engineering practice is one of two complementary companies, the other offering Architectural Services. The successful candidate will work closely with the Architectural team.

Please note that we will only consider candidates who are already Chartered Structural Engineers or appropriately experienced Chartered Civil Engineers.

To apply please send your CV to:
